

MCRF275

This is the strong side of a thin gauge magnet laminated to a clear PET. The clear PET acts as a carrier for the magnet. The laminated construction can be applied as a patch and die cut to make an integral magnet. The protective clear PET layer protects the magnet to allow for laser processing. A test run is recommended.

MC225 8 mil Integral Magnet with Anti Block Coating

TC50604 #604 (R) – Ultra removable “cling” adhesive. This is a solvent free water-based removable adhesive.

TC50103 Water Top Coat W Gloss Laser W
