

PBI200

This is a piggyback label stock with an image producing liner. The face stock is a bright white EDP that can be both press printed, hand written, or dot matrix printed. This is ideal when the customer needs a copy of the variable print that is imaged at the customer site. This material can be die cut and applied on a label applicator or applied on a patch applicator with no die cutting. The standard perm will be somewhat removable from smooth surfaces like glass and shelving but permanent to corrugated or other paper surfaces.
