

TSQH065AN

This a two liner transfer tape for use in making integral labels for blood bags. The adhesive is a heavy coat weight so pattern edges are required. The AN pattern is 8.375" with 1/8' dry edges left and right. Custom patterns are available upon request with a 1,000 msi min. Stock rolls are available in 8.375" widths. Key Selling Points 1. The adhesive is FDA compliant for blood bag labels. This product should be used when our label is the primary label affixed to the blood bag. Secondary labels do not require the same premium adhesive. 2. The form stock chosen should simulate a latex face stock. 3. New orders should be subject to test. A test should include the laser printing and the application of the label to the blood bag. 4. Please note that applying the label at room temperature is best. Any condensation on the bag could affect the adhesive performance.

SL1056A 42# ultra easy clay coated Liner (Release 5g - 30g, 1" Tesa Tape at 180° 300ipm) Silicone coated one side

TC50614 #614 (Q) – Mid-tack removable adhesive that is blood bag compliant, direct food, and skin safe. Excellent for shelf markers.
