

TTDH040

This is a two liner transfer tape used to add adhesive to the substrate of your choice. This is a heavy coat weight of our #616 perm to ensure a permanent bond for virtually any application. The adhesive should be patterned to allow for dry edges to keep adhesive from oozing when laminating. The liners are carefully controlled for release to ensure no adhesive confusion. The base liner is an easy/medium release to allow for use with tamper security coatings and not cause the security coating to activate when releasing from the liner. The 616 adhesive is a water based acrylic designed to replace solvent adhesives. The coat weight of adhesive is slightly over one mils allowing for a long lasting durable bond.

SL1056 42# Ultra- Easy Release Silicone Liner (Release 5g - 25g, 1" Tesa Tape at 180° 300ipm)

616 High Shear durable adhesive that performs excellent on both high energy and low energy surfaces. This water based acrylic adhesive is an excellent choice when wanting to replace a solvent adhesive.

SL5055 42# SCK Liner - Medium Release (15g - 50g release 2" strip Tesa Tape 300 ipm 180°)
